CONTENTS

Ch. I	Goal of the game	art. 1–1
Ch. II	Control points	art. 2–3
Ch. III	Economy	art. 4–7
Ch. IV	Communications	art. 8–10
Ch. V	How the game runs	art. 11–16

CHAPTER I

GOAL OF THE GAME

Art. 1. The core idea

After the catastrophe, the territory was left without proper control. A few important sites remain. Three communities are trying to survive the night and earn a place in the evacuation.

Each side has three main tasks:

1. **control the territory;**
2. **extract fuel;**
3. **restore communications.**

CHAPTER II

CONTROL POINTS

Art. 2. Six control points

There are 6 control points on the territory: CP-01, CP-02, CP-03, CP-04, CP-05, CP-06. The organisers track their status through the ARES ALPHA system.

The goal is simple: **capture** → **hold** → **gain the advantage**.

Art. 3. Three types of points

Regular points: CP-01, CP-02, CP-03

Earn currency (credits) while held.

ARES ALPHA special points: CP-04, CP-05

The toughest points. They are not just flags: each has a special game task, for example destroy, activate or hit a target. Completing it earns the side a bonus.

Main point: CP-06 – THE CORE

The main objective to fight over at night. By day it is worth little, but once the night phase begins its value rises sharply.

CHAPTER III

ECONOMY

Art. 4. Income from points

Every controlled point earns **1 REMNANT CREDIT per hour**.

Example. THE ORDER controls CP-01, CP-04 and CP-06. Each hour the side receives 3 credits.

Art. 5. REMNANT CREDIT currency

REMNANT CREDITS are physical tokens. They can be received, kept, passed on, sold, traded and used to complete tasks.

The currency is not tied to the commander alone: players can trade directly, without the organisers.

Example. THE FREE needs fuel and THE REMNANT has some. They agree on 2 credits per canister. Deal done.

Art. 6. Fuel

There are two oil towers on the map: **FUEL TOWER A** and **FUEL TOWER B**. Each tower produces **2 canisters per hour**, so at most 4 canisters per hour in the whole game.

Fuel goes to the side that controls the tower. Output is credited only for a **full hour**: the person in charge records it every hour.

Example. If the tower is captured 40 minutes into the hour, the next 2 canisters go to the new owner when the next hour begins. Minutes don't count.

Art. 7. What you can do with fuel

- **Use it:** fuel is needed to light your base. No fuel, no light: 1 canister = 1 hour of light at the base.
- **Trade it:** for example, 1 canister = 3 credits, or at the price set by the game economy.
- **Sell it:** players agree among themselves, the price is free.

If a side captures someone else's camp or site, it decides itself whether to light it or leave it dark. That's why fuel is especially valuable at night.

CHAPTER IV

COMMUNICATIONS

Art. 8. Radio towers

At the start of the game all communications are down. There are three radio towers:

- **RADIO-01** and **RADIO-02** are on the territory. They are activated by completing a game task, for example restoring power or an activation procedure.
- **RADIO-03** is at THE REMNANT base. It can only be started with the help of the local technician.

Art. 9. The local technician

The technician is a character who has the right **to help or not to help**. He is not obliged to start the tower.

To get his help, you need to find him, negotiate, offer something, protect him, pay, trade fuel or meet his condition. He makes the decision himself.

RADIO-03 is an extra advantage, not a win condition. The other two towers can be activated without the technician.

Art. 10. What communications give you

Once connected, the side gets access to game comms and information: tasks, coordinates, messages, warnings and event information.

Communications are an advantage, not a victory.

CHAPTER V

HOW THE GAME RUNS

Art. 11. The first hours: 17:00–21:00

Players get to know the map. Main tasks:

- capture points;
- find the fuel towers and start extracting;
- earn the first credits;
- look for communications;
- trade and build relationships.

Art. 12. 21:00 – THE CORE

The organisers announce: **“The territory’s power grid is unstable. From now on, resources and communications are critical.”** The game speeds up. Three things change:

1. fuel becomes valuable: without it there is no light;
2. CP-04 and CP-05 with ARES ALPHA targets get additional tasks;
3. CP-06 – THE CORE becomes the main point of the night.

Art. 13. Night events

During the night the organisers announce several major events that change the situation on the map and give the sides new information.

Art. 14. Morning and final preparation

05:00–10:00. Morning is the time to prepare for the final. The sides already have credits, fuel, control points, intel, deals and conflicts.

10:00–15:00. Each side receives 2–3 simple individual tasks.

Example. THE ORDER – hold certain points. THE FREE – collect a certain number of credits. THE REMNANT – activate or defend a certain site.

Art. 15. 15:00 – THE FALL

The final phase begins. All sides receive the message: “**EVACUATION CONFIRMED**”.

From this moment control points, credits, fuel, completed tasks and ARES ALPHA special targets decide the outcome. The game ends at 17:00.

Art. 16. Final formula

- **CONTROL** – how many points you control;
- **CREDITS** – how much currency you earned;
- **FUEL** – how much fuel you extracted and kept;
- **MISSIONS** – how many key tasks you completed;
- **NIGHT** – which night sites you managed to hold.
