

REPLICA RULES, CHRONOGRAPH TESTING AND MINIMUM ENGAGEMENT DISTANCES

REMANT I – THE FALL · 24-hour airsoft game

Event	Dates	Location	Edition
REMANT I – THE FALL	16-18.10.2026	Republic of Moldova	Edition 1 · October 2026

CONTENTS

Ch. I	Admission to the game	art. 1-2
Ch. II	Replica power	art. 3-6
Ch. III	Minimum engagement distance (MED)	art. 7-13
Ch. IV	Responsibility and penalties	art. 14-17

CHAPTER I

ADMISSION TO THE GAME

Art. 1. Chronograph zone and replica marking

After parking and settling in, participants report to the chronograph zone, where:

- the muzzle energy of each replica is checked in **joules (J)** against the limits set for each category;
- the replica and its energy are checked and recorded on the chrono sheet;
- the participant fills in and signs the consent to the processing of personal data (GDPR), the event rules and the participant's obligations;
- once approved, the replica is marked according to the procedure set by the organisers.

Art. 2. Check-in zone

After the chronograph, participants report to the **check-in** zone, where:

- the participant's attendance is recorded;
- the signed participation / GDPR / rules-compliance declaration is handed in;
- the completed and signed chrono sheet is handed in;
- the participant receives the game materials and any identification items needed to take part in the event.

CHAPTER II

REPLICA POWER

Art. 3. General principles

For the safety of all participants, every replica is chronographed before entering the game.

Replica power is expressed in **joules (J)** and determines the minimum distance from which it may be used against another participant.

MED (minimum engagement distance) is the minimum distance from which a participant may be shot with a replica of a given category.

Art. 4. Categories and limits

Category	Max energy	Max BB	MED	Fire mode	At night
 P1	1.0 J	0.28 g	1 m	auto / semi / single	allowed
 P2	1.5 J	0.32 g	10 m	auto / semi / single	allowed
 DMR	2.0 J	0.40 g	20 m	single only	not allowed
 SNIPER / BA	3.0 J	0.48 g	30 m	single only	not allowed

P1 – up to 1.0 J · max BB 0.28 g · MED 1 m

- Fire modes: auto / semi / single.
- **Inside forts and bases only single fire is allowed.**

P2 – up to 1.5 J · max BB 0.32 g · MED 10 m

- Fire modes: auto / semi / single.
- **Using this category within 10 m of forts and bases is prohibited.**
- From inside forts and bases, P2 replicas may only be used on targets at least 10 m away.

DMR – up to 2.0 J · max BB 0.40 g · MED 20 m

- **Single** fire only. The replica must meet the technical requirements set for the DMR category.
- **Use is allowed in daytime only. Use at night is prohibited.**
- Use against a participant closer than 20 m is prohibited.

SNIPER / BA – up to 3.0 J · max BB 0.48 g · MED 30 m

- **Single** fire only. This category is for **bolt-action / sniper** replicas, as required by the rules.
- **Use is allowed in daytime only. Use at night is prohibited.**
- Use against a participant closer than 30 m is prohibited.

Art. 5. Replica checks

- All replicas are checked before entering the game.
- Chronographing is done with the **hop-up set as in game**.
- Replica energy is measured in joules (J).
- During the game, participants must use BBs of the weight declared and checked at the chrono.
- The organisers may request a repeat check of any replica during the game.

Changing BB weight after the chrono in order to alter the replica's performance is prohibited.

If a replica exceeds the limit of its category, the organisers may ban its use until the issue is fixed.

Art. 6. Additional checks

The organisers may check at any moment of the event:

- replica power;
- BB weight used;
- fire mode;
- rate of fire (ROF);
- integrity of HPA seals;
- compliance of the replica with its declared category.

If a replica is found in a configuration different from the one approved at the chrono, it may be withdrawn from the game until the issue is fixed and it is re-approved by the organisers.

CHAPTER III

MINIMUM ENGAGEMENT DISTANCE (MED)

Art. 7. Measuring the distance

MED is measured approximately, from the muzzle to the participant being shot at.

If the distance cannot be judged with certainty, the participant must not fire.

Art. 8. General rule

Shooting a participant who is closer than the MED of the replica's category is prohibited.

Example. A player with a DMR (MED 20 m) sees an opponent at about 10 m. **They may not shoot them with the DMR.**

The participant must:

- reduce the risk of engaging from a prohibited distance;
- use a suitable secondary replica, if allowed;
- fall back and find a suitable firing position.

Art. 9. Engagement at very close range

At very close range, participants must avoid shooting an opponent directly when there is a risk of a painful or dangerous hit.

In a surprise contact at very close range, the following is recommended, in this order:

1. use a secondary replica, if allowed;
2. fall back or change position;
3. in extremely close contact, resolve the situation according to the special rules set by the organisers.

Deliberately shooting at the face, neck or other sensitive areas from very close range is prohibited.

Art. 10. Surprise contact

When two or more participants suddenly meet at a distance shorter than the MED of their replicas, the priority is to avoid shooting from a prohibited distance. In this situation:

- reflex shooting with the primary replica is not recommended;
- each participant must assess the situation quickly;
- a secondary replica may be used, if allowed;
- in extremely close contact, referees may rule the situation a **simultaneous hit**, depending on the circumstances.

A reflex shot from a few metres with a DMR or sniper replica cannot be justified with “it was a surprise contact”.

Art. 11. Buildings, rooms and enclosed spaces

Inside buildings, rooms, trenches and other narrow spaces, the distance between participants can shrink very quickly. Carrying a DMR or sniper replica does not give the right to ignore MED.

If the engagement distance cannot be respected:

- a suitable secondary replica is used;
- the primary replica is not fired.

For certain buildings or zones, the organisers may set **additional restrictions on the use of high-power replicas**. These will be announced before the game starts and/or marked on the field.

Art. 12. Shooting at a participant behind a barrier

MED applies regardless of whether the target is:

- in open ground;
- behind a window;
- behind a loophole (firing slot);
- in a trench;
- inside a building;
- behind a fortification;

- in any other game position.

A barrier between shooter and target **does not cancel the minimum engagement distance**.

In a disputed situation, the decision of the referee on the spot is final for that situation.

Art. 13. Body areas not to be targeted

Regardless of replica category and engagement distance, participants must avoid, as far as possible, shooting directly at the:

- face;
- eyes;
- mouth;
- neck;
- groin.

Accidental hits can happen during play, but **deliberately shooting at sensitive areas may be penalised regardless of distance**.

Wearing the mandatory protective equipment, as required by the event rules, is each participant's responsibility.

CHAPTER IV

RESPONSIBILITY AND PENALTIES

Art. 14. Shooter's responsibility

The fact that a replica was checked and approved at the chrono **does not transfer responsibility to the organisers**. The organisers check the replica's energy and technical compliance.

The participant is responsible for:

- choosing the category of use;
- respecting MED;
- choosing the right replica for the tactical situation;
- following the safety rules;
- avoiding prohibited close-range shooting.

Art. 15. MED violations

15.1. Minor offence

An accidental violation, without intent and not repeated. May be penalised by:

- a verbal warning;
- a caution from the referee.

15.2. Repeated offence

Repeated MED violation after a warning. May be penalised by:

- an official warning;
- temporary removal from the game;
- a penalty under the general rules.

Art. 16. Referees' authority

Referees may temporarily stop the use of a replica or a participant's play when they observe:

- a MED violation;
- use of a replica in the wrong category;
- dangerous shooting;
- repeated behaviour that endangers other participants.

Referees' safety decisions take priority over the scenario. Any dispute is discussed **after leaving the game situation**, not during the engagement.

Art. 17. Core principle

The more powerful the replica, the longer the engagement distance. There is no such thing as "powerful replica = the right to shoot from any distance".

Before the game starts, every player must know:

- their replica's category;
- its energy;
- the BB weight used;
- the applicable MED;
- the rules on secondary replicas.

Participant safety matters more than taking out an opponent. Whenever there is doubt about the distance or the safety of a shot, the participant must choose the option that reduces the risk of injury.
